

RampRep Sweat-Mode Feng Shui UI Report

Branch: feat/sweat-mode-feng-shui-ui. Local verification date: June 23, 2026. App URL under test: <http://127.0.0.1:5173/ramprep/>.

Summary

- Reset the daily experience around five bottom-nav items: Today, Train, Ride, Carbs, More.
- Rebuilt Today as a four-tile cockpit with one primary Train action and no edit/filter clutter.
- Added full-screen active workout mode that shows one exercise at a time, 72px actions, giant targets, hidden notes, and hidden swap controls.
- Added a dedicated Ride screen with ride, hill, recovery, and Burley/trailer templates.
- Reworked Carbs into a giant net-carb logger with six meal buttons and a -5/-1/+1/+5 integer picker.
- Moved reports, library, workouts manager, roadmap, settings, backup, and advanced edit mode under More.
- Added RAM Prep branding assets, versioned network-first PWA cache behavior, and an update prompt.

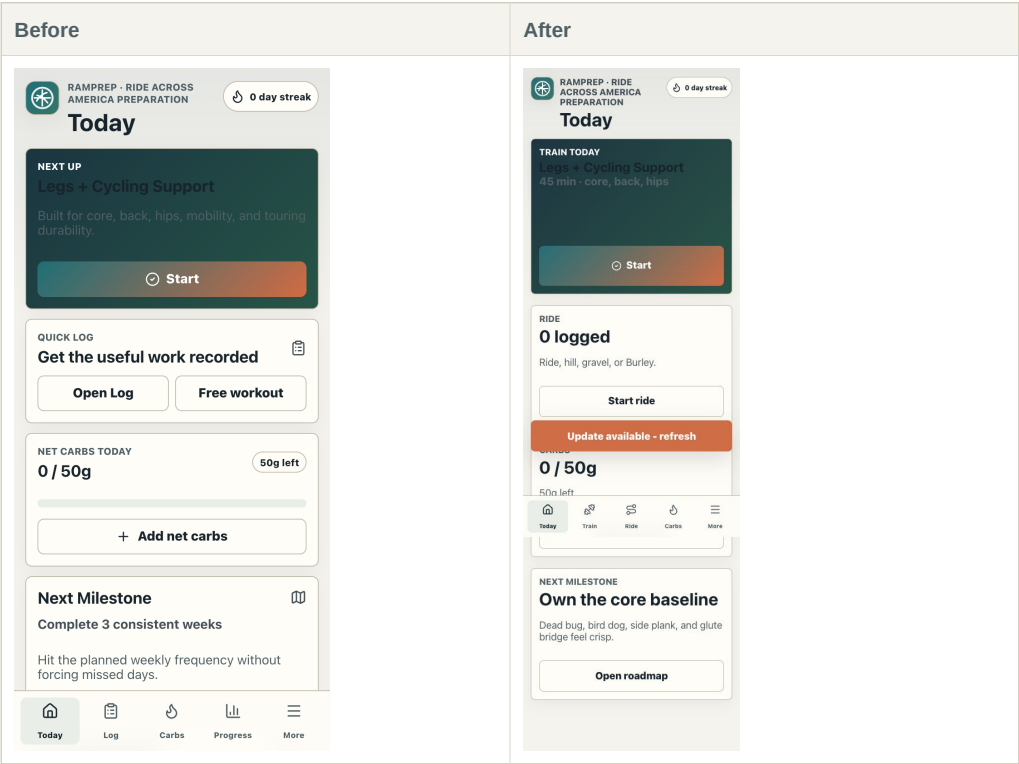

Why This Is Sweaty / No-Reading-Glasses UI

- Primary body text now uses the 18px design-token floor; labels use 16px; screen titles use 34-44px sizing.
- Primary actions use a 72px minimum touch target and secondary actions use 56px.
- Daily screens use one obvious action per tile and hide reports, filters, edit controls, duplicate/reorder actions, and dense logs.
- Manual QA at 390x844 and 430x932 showed scrollWidth equal to clientWidth on the primary screens.

Before / After Screenshots

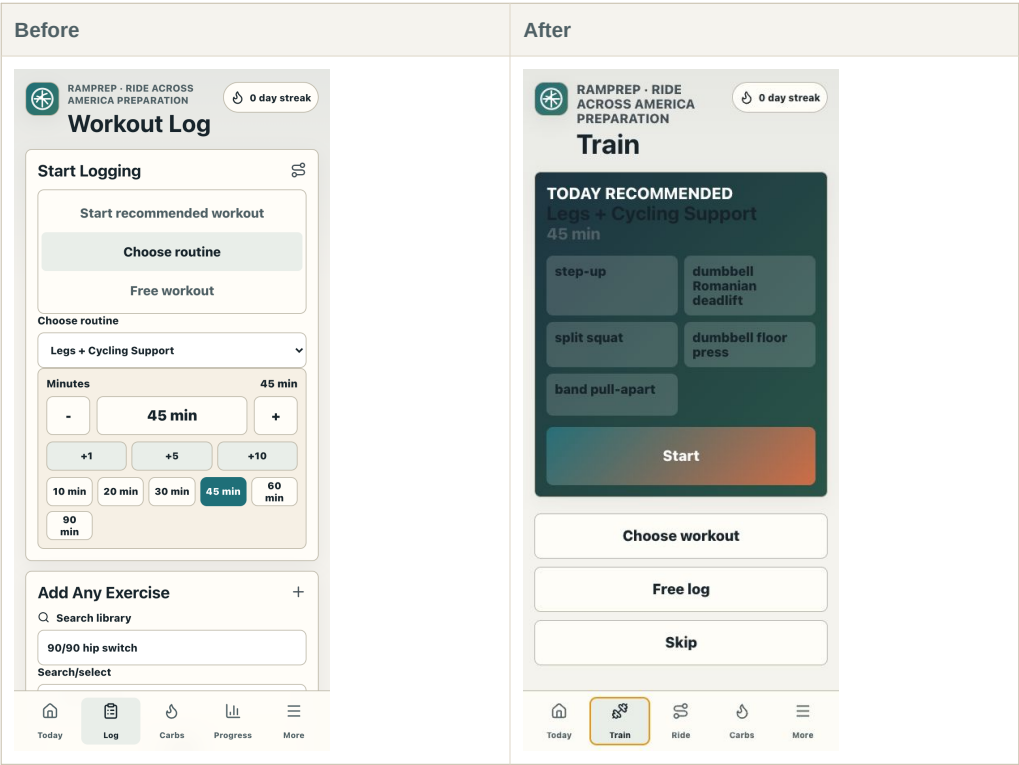

The before screenshots come from the previous RampRep report assets. The after screenshots were captured from this branch at 390x844 unless noted.

Today cockpit

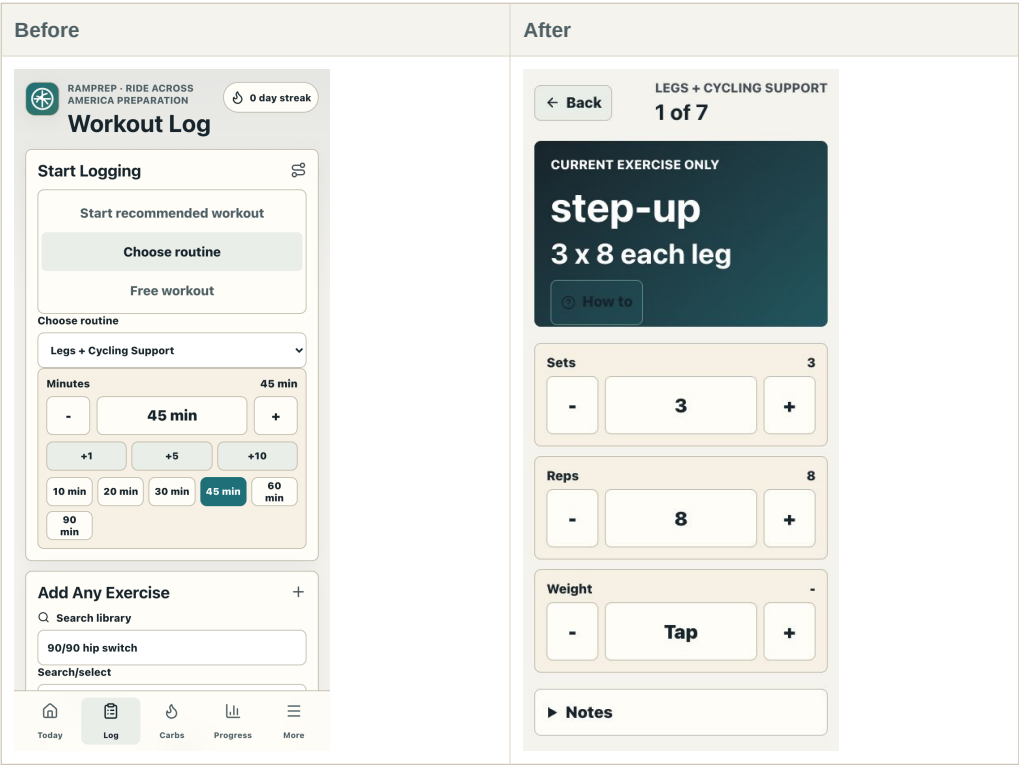

After: four-tile cockpit, no recent-log/admin card.

Train default

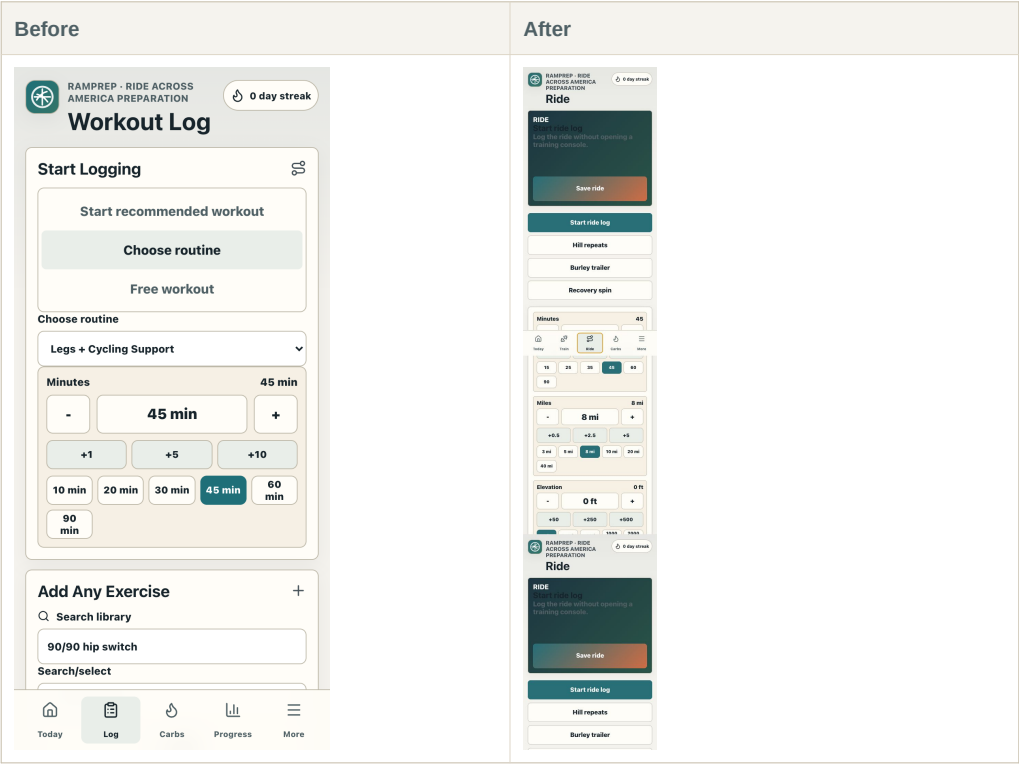

After: one huge recommended workout card and Start action.

Active workout

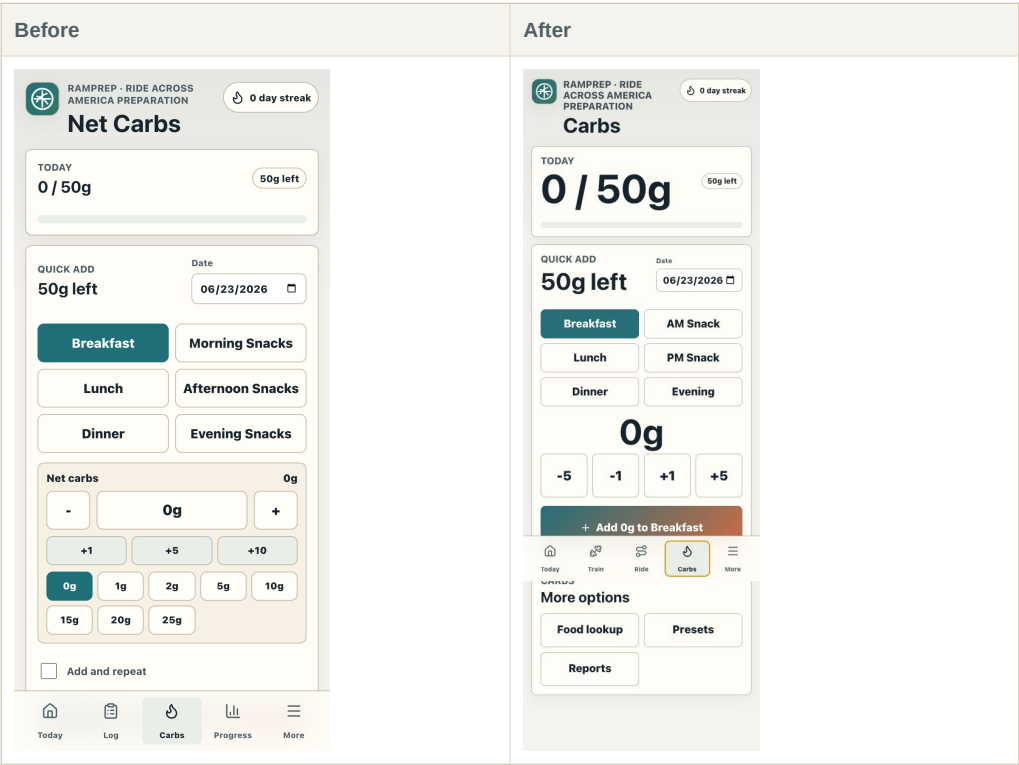

After: one exercise at a time, 72px Done/+ Set/Skip actions.

Ride screen

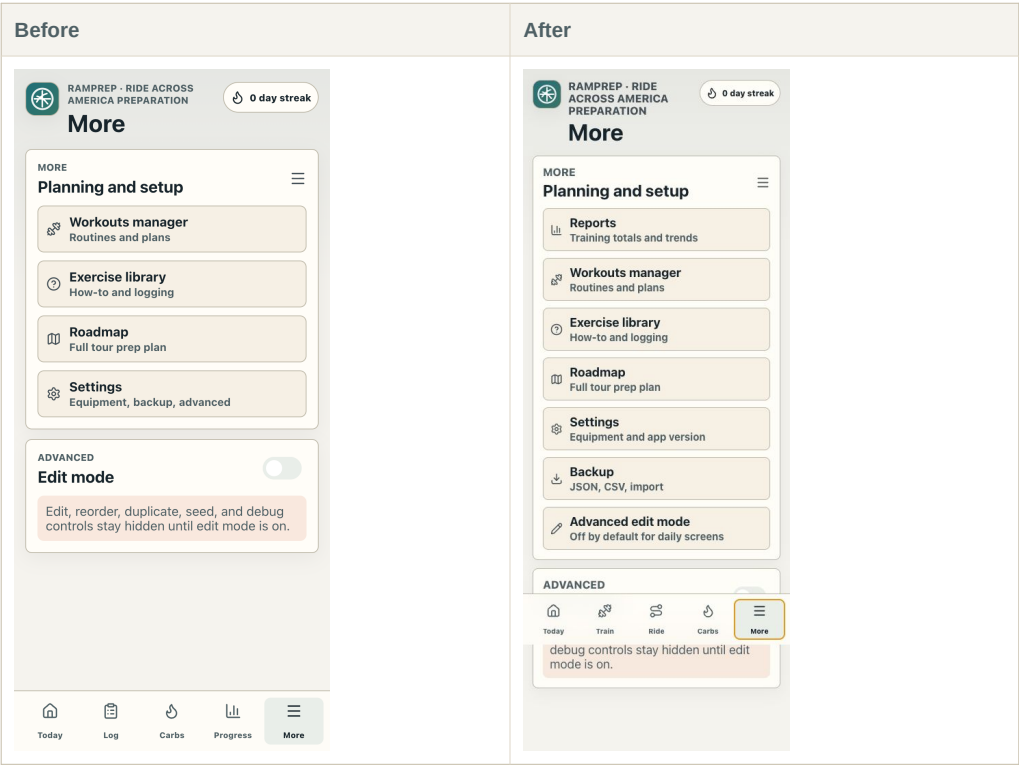

After: dedicated ride templates instead of buried bike entries.

Carbs

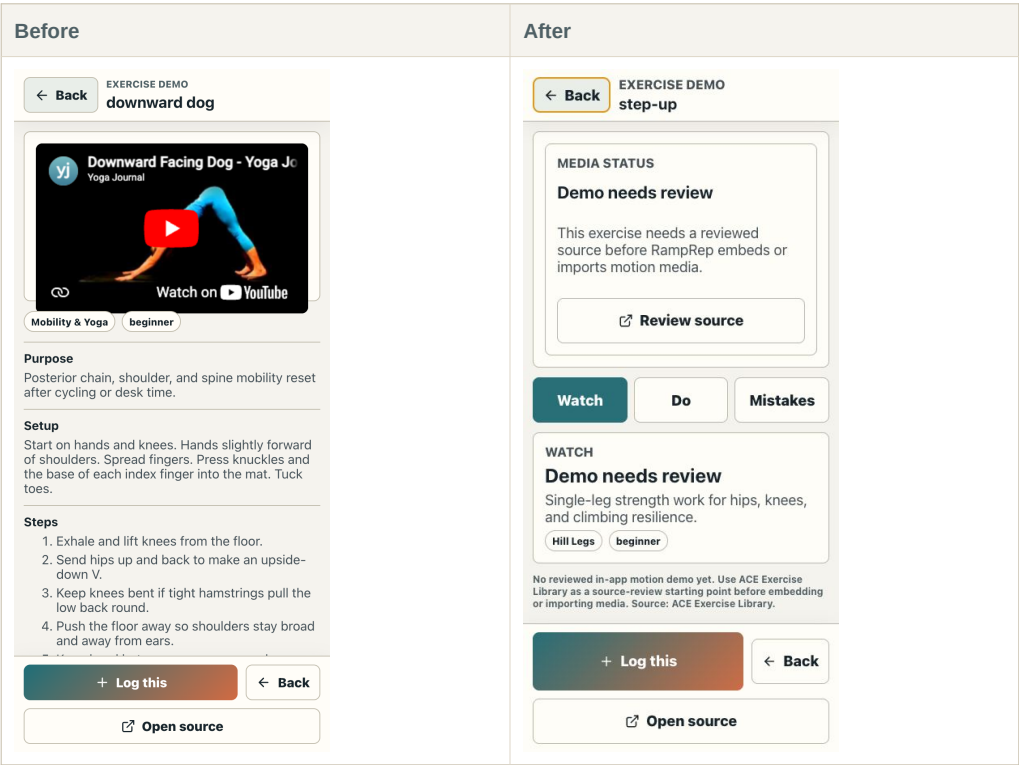

After: giant net-carb total and six meal buttons.

More

After: calm menu for hidden complexity.

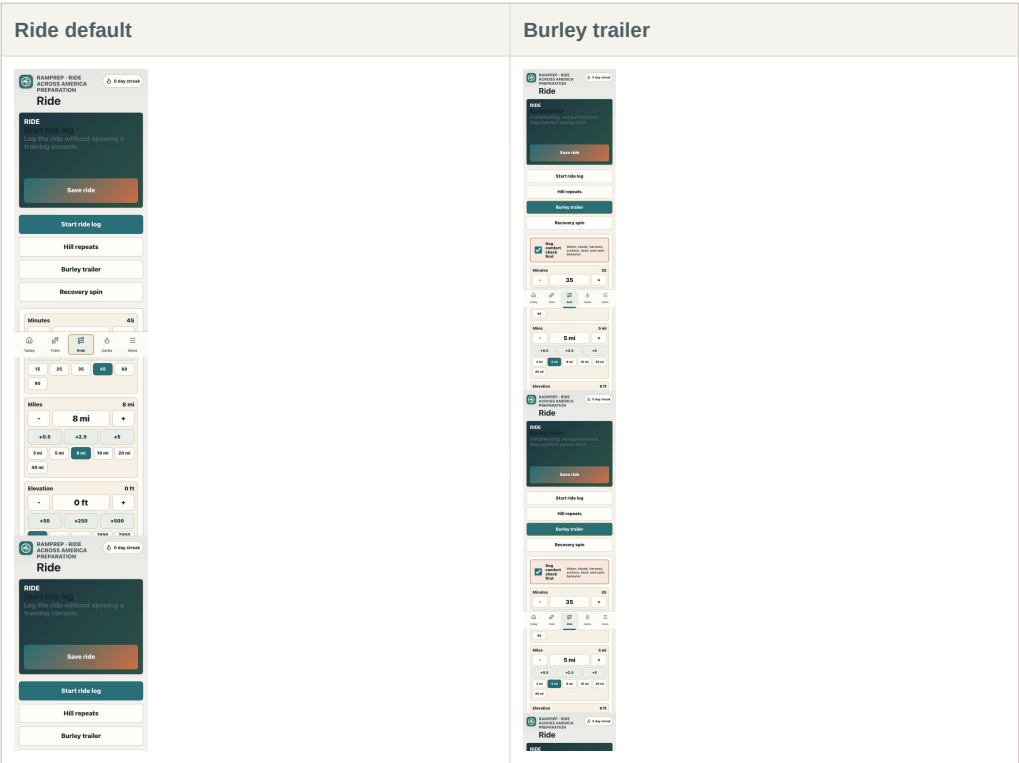

Exercise demo

After: Watch / Do / Mistakes tabs and honest review-needed media state.

Ride / Burley Flow

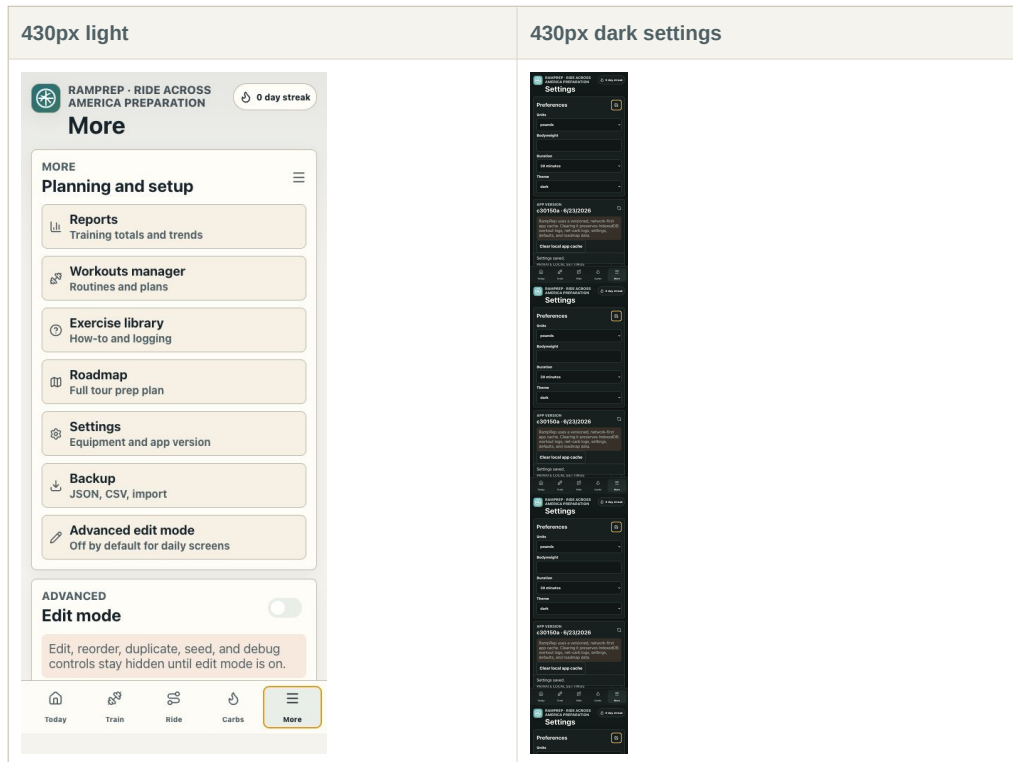

Dedicated Ride and Burley trailer mode

Burley mode places Dog comfort check first, defaults dog weight to 45 lb, calculates total towed load, and guards against hard repeats with dog/trailer load.

430px and dark-mode QA

More screen at 430x932 and Settings dark mode at 430x932

Exercise Library Cleanup

Default visible groups are Core Armor, Back & Posture, Hips & Glutes, Hill Legs, Carries & Load, Mobility Reset, Ride Sessions, and Burley / Trailer.

- Downward dog, sphinx pose, cobra pose, and child's pose side reach are retained only as optional/search-only mobility items.
- Downward dog is not in default routines, not in Today recommendations, and not in the default library list.
- The default library now prioritizes bike-tour prep: core armor, posture, hips/glutes, hill legs, carries/load, mobility reset, ride sessions, and trailer handling.

Media Source Strategy

- No fake SVG or AI-generated exercise demos are used as primary demo media.
- Verified media is linked or embedded from reputable external sources; YouTube is embedded only with controls and playsinline, not downloaded or cached.
- Missing media says Demo needs review instead of pretending to demonstrate the movement.
- Source records live in src/data/verifiedExerciseSources.ts with provider, source type, URL, embed URL when relevant, reviewer, reviewed date, notes, and quality status.

Verified Exercise Demos

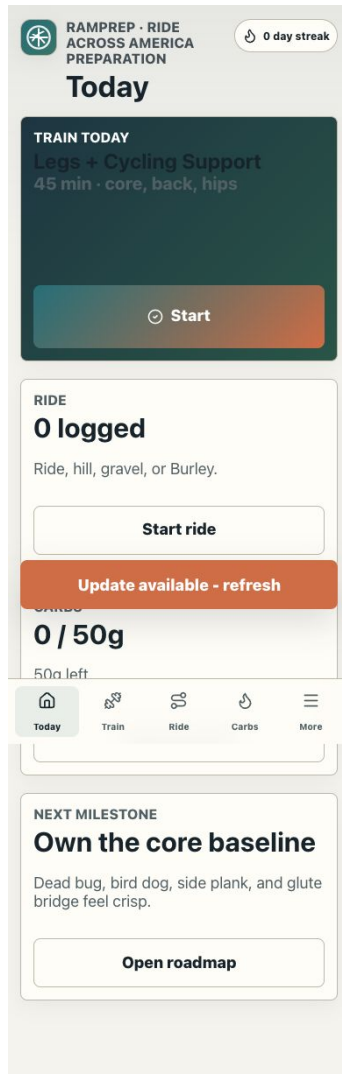

- Downward Facing Dog - Yoga Journal YouTube embed (retained search-only, not default)
- 90/90 Hip Switch - Rehab Hero external how-to
- Goblet Squat - NASM external how-to
- Bird Dog - ACE Exercise Library external how-to

Exercises Still Needing Media Review

cat-cow	band-face-pull
childs-pose-side-reach	band-external-rotation
low-lunge-hip-flexor-stretch	farmer-carry
figure-four-stretch	suitcase-carry
hamstring-stretch	dead-bug
thoracic-open-book	side-plank
sphinx-pose	glute-bridge
cobra-pose	glute-bridge-march
couch-stretch	pallof-press
ankle-rocks	calf-raise
kettlebell-deadlift	soleus-raise
dumbbell-romanian-deadlift	tibialis-raise
step-up	wall-sit
split-squat	single-leg-romanian-deadlift
reverse-lunge	Burley loaded trailer ride
one-arm-dumbbell-row	hill-repeat-ride
band-pull-apart	low-cadence-climb-intervals

Branding

- Added public/favicon.svg, public/apple-touch-icon.svg, and public/ramrep-logo.svg.
- Brand text: RampRep / Ride Across America Preparation.
- Visual palette: deep fjord blue, warm road clay, off-white paper, pine green.

Header/logo in the live app screenshot above; standalone SVG assets are committed under public/.

Accessibility Notes

- Body text minimum token: 18px. Label token: 16px. Card title token: 24px. Screen title token: 38px.
- Primary button token: 72px. Secondary button token: 56px. Utility control token: 44px.
- Active workout buttons measured at 72px in browser QA.
- No horizontal overflow observed at 390x844 or 430x932 for the primary screens.

PWA / Cache Notes

- Offline purity is not prioritized. The service worker uses a versioned network-first cache for app assets.
- External videos are not cached.
- The app shows an Update available - refresh prompt when a new service worker is ready.

- Settings includes app version and Clear local app cache; IndexedDB is preserved.

Test Results

- npm run lint - passed
- npm test -- --run - 13 files, 53 tests passed
- npm run build - passed

Deployment Status

- Branch: feat/sweat-mode-feng-shui-ui.
- Local build and QA: passed.
- GitHub Pages URL target: <https://kevinhegg.github.io/ramprep/>.
- Deployment confirmation will be updated after the branch is merged to main and the Pages workflow completes.

Manual Follow-Up Needed

- Continue manual source review for exercises marked needsReview.
- Decide whether Free log should become a fully guided one-exercise mode or remain an advanced escape hatch.
- Use the live iPhone install after deployment to confirm Safari Home Screen and service-worker update behavior.

Deployment Status Addendum

Final status after merging and deploying the sweat-mode UI pass.

Succeeded

- Branch pushed: feat/sweat-mode-feng-shui-ui.
- Main updated and pushed at implementation commit 450a7a3.
- GitHub Pages workflow succeeded: <https://github.com/KevinHegg/ramprep/actions/runs/28068821889>.
- Live URL: <https://kevinhegg.github.io/ramprep/>.
- Live smoke passed at 390px: Today heading present, bottom nav exactly Today / Train / Ride / Carbs / More, Train today visible, Ride visible, and scrollWidth equals clientWidth.

Note: this addendum supersedes the earlier pre-deployment status note in the report body.
