

RAMprep Routine Rotation, Variation, and Branding Report

Branch: feat/ramprep-routine-rotation-variation-branding

Implementation commit: 68c5a30

Report commit: created after this PDF is generated; see final git log.

Live app: <https://kevinhegg.github.io/ramprep/>

- Expanded Train from three scheduled routines to a persisted five-routine rolling sequence: A, B, C, G, H.
- Added Bench + Posture + Core and Hill Armor + Load without moving Ride/Burley work into Train.
- Added controlled Change it up previews with at most two same-slot, video-backed accessory substitutions.
- Added direct Browse routines access from Train with Rotation and Recovery & Mobility sections.
- Corrected user-facing branding to RAMprep and added mark, horizontal logo, favicon, Apple touch icon, and social card assets.
- Preserved video-first Watch/Cues/Avoid exercise demos and kept activity sessions as Log/Checklist items.

Why Train Still Opens To The Next Routine

The Train screen continues to make the next recommended routine the obvious primary action. The change is underneath: the next routine now comes from a persisted RoutineRotationState instead of calendar day assignments. Opening, browsing, previewing, starting, abandoning, supplemental recovery, Ride, Walk, Ruck, and Burley logs do not advance the pointer. Completing a rotation routine advances to the following routine. Skip defaults to keeping the same routine next, with an explicit option to move on.

Rolling sequence diagram

Week	Session 1	Session 2	Session 3
1	A - Back + Hinge + Core	B - Legs + Cycling Support	C - Conditioning Circuit
2	G - Bench + Posture + Core	H - Hill Armor + Load	A - Back + Hinge + Core
3	B - Legs + Cycling Support	C - Conditioning Circuit	G - Bench + Posture + Core

- Rotation IDs: routine-a-back-hinge-core, routine-b-legs-cycling-support, routine-c-conditioning-circuit, routine-g-bench-posture-core, routine-h-hill-armor-load.
- Supplemental IDs: routine-d-10-minute-mat-mobility, routine-e-recovery-core-back.
- Ride-only ID: routine-f-burley-loaded-trailer-ride.

Before And After UI Evidence

Before screenshots were captured from commit d630554. After screenshots were captured from the implementation branch at 390x844, 430x932, and 1440-wide browser widths.

Routines

ROTATION

Back + Hinge + Core

Posterior chain, upper-back strength, loaded carry, and core control.

45 min

Next

Start

Legs + Cycling Support

Climbing legs, hinge durability, pressing balance, and calf capacity.

45 min

Start

Conditioning Circuit

Crisp full-body conditioning that preserves movement quality.

30 min

Start

Bench + Posture + Core

Portable-bench upper-back durability, pressing strength, hip extension, anti-rotation, and loaded trunk stability.

45 min

Start

Hill Armor + Load

Climbing legs, posterior-chain endurance, calf capacity, trunk stiffness, and load tolerance.

45 min

Start

CHANGE IT UP

Changed 2 of 8

Accessory substitutions only. Anchors stay fixed and every replacement keeps its own Watch video.

Mobility

~~90/90 hip switch~~

thoracic open book

Hinge / glute

~~floor glute bridge~~

dumbbell Romanian deadlift

Try different changes

Keep routine unchanged

Routine Tables

Routine	Role	Duration	Purpose	Exercises
Back + Hinge + Core	rotation	45 min	Posterior chain, upper-back strength, loaded carry, and core control.	90/90 hip switch; floor glute bridge; kettlebell deadlift; goblet squat; bench-supported one-arm dumbbell row; suitcase carry; dead bug; side plank.
Legs + Cycling Support	rotation	45 min	Climbing legs, hinge durability, pressing balance, and calf capacity.	Step-up; dumbbell Romanian deadlift; split squat; dumbbell bench press; band pull-apart; bird dog; bench hip thrust; calf raise.
Conditioning Circuit	rotation	30 min	Crisp full-body conditioning that preserves movement quality.	Kettlebell deadlift; goblet squat; bench-supported one-arm dumbbell row; Pallof press; farmer carry.
Bench + Posture + Core	rotation	40-45 min	Portable-bench upper-back durability, pressing strength, hip extension, anti-rotation, and loaded trunk stability.	Thoracic open book; step-up; bench-supported one-arm dumbbell row; dumbbell bench press; bench hip thrust; band face pull; Pallof press; suitcase carry.
Hill Armor + Load	rotation	40-45 min	Climbing legs, posterior-chain endurance, calf capacity, trunk stiffness, and load tolerance.	Ankle dorsiflexion rocks; goblet squat; dumbbell Romanian deadlift; split squat; calf raise; farmer carry; dead bug.
10-Minute Mat Mobility	supplemental	10 min	Short mobility reset.	90/90 hip switch; thoracic open book; ankle dorsiflexion rocks; hip-flexor stretch.
Recovery Core and Back	supplemental	20 min	Easy core and back durability.	Bird dog; dead bug; side plank; floor glute bridge; thoracic open book.

Change it up

Back

Controlled Change It Up

- No silent randomization: the user sees a preview before anything changes.
- No more than two slots change per proposal.
- Anchor exercises stay fixed during automatic variation.
- Substitutions must match the same functional slot, avoid duplicates, use owned equipment, and have approved embedded videos.
- Apply for today stores a todayOnly override; Make these my routine defaults stores a routineDefault override; Restore original deletes overrides without rewriting seed rows.

Substitution Pools And Anchors

Slot	Pool
Mobility	90/90 hip switch; thoracic open book; ankle dorsiflexion rocks; hip-flexor stretch
Knee-dominant	goblet squat; step-up; split squat
Hinge/glute	kettlebell deadlift; dumbbell Romanian deadlift; floor glute bridge; bench hip thrust
Pull/posture	bench-supported one-arm dumbbell row; band pull-apart; band face pull
Core	dead bug; bird dog; Pallof press; side plank
Carry	farmer carry; suitcase carry
Push	dumbbell bench press
Calf	calf raise

- Back + Hinge + Core anchors: kettlebell deadlift, bench-supported row.
- Legs + Cycling Support anchors: step-up, dumbbell Romanian deadlift.
- Conditioning Circuit anchor: farmer carry/circuit slot.
- Bench + Posture + Core anchors: bench-supported row, dumbbell bench press.
- Hill Armor + Load anchors: goblet squat, dumbbell Romanian deadlift.

Routine Coverage Audit

Metric	Result
Default-visible movement exercises	22
Used in regular rotation routines	21
Used only in supplemental routines	1
Marked library-only	0
Unused without explanation	0
Band face pull proof	Used in Bench + Posture + Core, rotation routine G.

All default-visible movements are used in a Train rotation or supplemental recovery/mobility routine. Hip-flexor stretch is supplemental-only inside 10-Minute Mat Mobility; no default-visible movement is unexplained.

Video-First Preservation

- Default movement video coverage remains 100 percent: 22 of 22 default-visible movements have approved videos.
- Every routine movement and every automatic substitution pool candidate has an approved embedded video.
- Watch, Open in YouTube, Cues, and Avoid remain intact.
- No YouTube search URLs or provider root URLs are accepted by the source audit.
- Ride, Walk, Ruck, and Burley sessions remain activity sessions with Log/Checklist behavior, not exercise-demo movements.

Branding Assets

Asset	Path / status
Horizontal logo	public/ramprep-logo-horizontal.svg
Mark	public/ramprep-mark.svg
Favicon	public/favicon.svg
Apple touch icon	public/apple-touch-icon.png, 180x180
Social card	public/ramprep-social-card.png, 1200x630
Manifest short name	RAMprep
User-facing old-brand scan	0 hits for old variants in source/public/README metadata scan.

Migration And Data Preservation

- Existing IndexedDB database name and /ramprep/ deployment path are unchanged.
- Routine roles and purpose metadata are backfilled without rewriting historical workout logs.
- G and H are added only when missing by stable ID.
- RoutineRotationState is created only when absent; existing explicit rotation state is normalized, not replaced.
- RoutineSessionOverride records preserve today-only and routine-default variations separately from seeded routine rows.
- Workout logs, carb logs, equipment, settings, roadmap, USDA private settings, ruck defaults, walking defaults, and personal exercise defaults remain in their existing stores.

USDA Security

The USDA key value is REDACTED. Exact-key scans reported zero hits in source, public assets, scripts, build output, reports, screenshots, and git diff. Private USDA settings remain local-only and are not included in JSON export.

Verification Results

Check	Result
npm run lint	passed
npm test -- --run	passed: 19 test files, 88 tests
npm run audit:media	passed: 66 source records
npm run audit:guides	passed
npm run audit:routines	passed
npm run build	passed; Vite large chunk warning only
Visual QA	390x844, 430x932, 1440-wide; overflowX 0 in all captured screens
GitHub Pages base	/ramprep/ preserved

Deployment Notes

- Feature branch: feat/ramprep-routine-rotation-variation-branding.
- Implementation commit: 68c5a30.
- Report commit: created after this PDF is generated.
- GitHub Pages workflow and live URL verification are completed after the branch is merged to main; final run ID and cache-busted URL are reported in the final handoff.

Remaining Manual Review Items

- Installed iPhone/Home Screen mode was not physically tested in this environment.
- The user should try the routine rotation on their real saved data and decide whether to mark all owned equipment accurately.
- Future variation expansion should add a verified push alternative before swapping dumbbell bench press automatically.
