

RampRep Video-First Reviewed Exercise Guides

Generated 2026-06-25. Branch: feat/video-first-reviewed-exercise-library. Base main: 77e4bd4. Implementation commit: 702695a. Live app: <https://kevinhegg.github.io/ramprep/>.

Scope

This was a narrow content-integrity repair. The default movement library now shows only exercise-specific verified videos. Activities remain Log/Checklist items. Draft and generated movement prose is hidden from ordinary users.

Root Cause

The previous seed helper reused broad movement-family instructions for quick exercises. The combined record named bench hip thrust/glute bridge was categorized as Hinge & Posterior Chain, so it inherited standing hinge/deadlift cues such as sending hips back, keeping load close, and finishing tall. Those cues are anatomically wrong for a bench hip thrust.

Repair Summary

Item	Result
Combined record	Future-facing combined bench hip thrust/glute bridge label removed. Retired mapping is documented.
New movement records	bench-hip-thrust, floor-glute-bridge, and search-only feet-elevated-glute-bridge.
Default movement policy	Default movement exercises must have verified video. Article-only and local-checklist coverage no longer pass.
Default movement coverage	100% (22 of 22).
UI behavior	Movement screen uses Watch, Cues, Avoid. Activities use Checklist and Safety.
USDA key	Private local setting preserved. Report value: REDACTED.

Before And After

Before panel is reconstructed from origin/main source text because the current app can no longer display the defective combined record.

Before: combined record with deadlift-like cues	After: bench hip thrust video-first Watch screen

Back

BEFORE · RECONSTRUCTED FROM
ORIGIN/MAIN
bench hip thrust/glute bridge

Do

Mistakes

Source

Bad prior state: a bench hip-thrust/glute-bridge record inherited standing hinge/deadlift cues.

DO
bench hip thrust/glute bridge

Setup

Bench-supported glute bridge or hip thrust for stronger hip extension.

1. Brace, soften the knees, and send hips back as if closing a car door.

2. Keep the load close and stop the descent before the spine rounds.

3. Drive the floor away and finish tall without leaning back.

EXERCISE DEMO
bench hip thrust

Watch

Cues

Avoid

CUES

Rest your upper back on the bench edge; plant both feet flat.

Brace ribs down, tuck chin slightly, and drive hips upward through your feet.

Stop when shoulders, hips, and knees form a straight line; squeeze glutes.

Default Library And Layout QA

The default Library shows WatchLog for movement exercises and Checklist/Log for activities. The app remains constrained to a phone frame on wide browser viewports.

The image displays two versions of the 'RIDE ACROSS AMERICA PREPARATION' app interface. On the left is a desktop browser view, and on the right is a mobile browser view. The desktop version features a large header with the app logo and name, a '0 day streak' badge, and a 'Workouts' title. Below this are tabs for 'Routines' and 'Library'. A search bar contains the text 'core, back, dumbbell...'. The main content area highlights a 'Mobility Reset' workout titled '90/90 hip switch', describing it as 'Hip internal and external rotation practice for saddle comfort and easier low-speed bike handling'. It includes a 'Video demo ready' status and two buttons: 'Watch' and '+ Log'. The mobile version shows a similar layout but with a 'Today' summary at the top, indicating '0 logged' and '50g left'. The bottom navigation bar is visible on both, with icons for 'Today', 'Train', 'Ride', 'Net Carbs', and 'More'.

Viewport	Shell width	Demo width	Overflow X	Header

step-up-to-bench	step-up to bench

Guide Contract And Template Audit Results

Exercise-specific semantic contracts now require each default movement guide to include expected concepts, reject forbidden concepts, match equipment/body position, match the approved source variant, and avoid duplicate/template contamination.

Audit	Result
Semantic contracts	Passed for every retained default movement.
Duplicate guide similarity	Passed. No unrelated movement guides are substantially identical.
Bench hip thrust contamination	Passed. Hinge/deadlift boilerplate is rejected and absent.
Combined slash names	Passed, excluding conventional 90/90 naming.

Validation Results

Check	Result
npm run lint	Passed.
npm test -- --run	Passed: 17 test files, 80 tests.
npm run audit:media	Passed: 66 source records.
npm run audit:guides	Passed.
npm run build	Passed. Vite emitted chunk-size warning only.
USDA secret scan	Passed: source, dist, reports, screenshots, tests, and git diff contained 0 matches. Value REDACTED.

Deployment Notes And Remaining Review

Item	Status
Branch	feat/video-first-reviewed-exercise-library
Implementation commit	702695a
Report artifact	docs/reports/RampRep-video-first-reviewed-guides-report.pdf
Workflow	Push branch, merge into main after checks, then verify GitHub Pages deployment.
Live URL	https://kevinhegg.github.io/ramprep/
Cache-busted verification URL	Use <a href="https://kevinhegg.github.io/ramprep/?v=<deployed-main-sha>">https://kevinhegg.github.io/ramprep/?v=<deployed-main-sha> after merge.

Remaining manual review items

- A human owner should watch every approved video end-to-end and replace any source that feels unclear, unsafe, or too chatty.
- Optional/search-only movements can be promoted later only after a specific video and approved guide pass the same audits.
- The report commit follows the implementation commit because the report references the stable implementation SHA.
