

RAMprep Remembered Defaults, Branding, and Deployment Report

Repository: KevinHegg/ramprep

Branch: feat/remembered-defaults-branding-deploy-fix

Implementation commit: 0cc3bc8 - Fix RAMprep branding and remembered exercise defaults

Main deployment/report SHA smoke-tested before final casing fix: 5ade066c6357bf87554467ade1f30c9f6622f315

Workflow run: <https://github.com/KevinHegg/ramprep/actions/runs/28254313216>

Cache-busted live URL verified for report commit:

<https://kevinhegg.github.io/ramprep/?v=5ade066c6357bf87554467ade1f30c9f6622f315>

Final handoff records the last post-report Pages SHA after the About RAMprep casing fix.

Summary

- Corrected user-facing branding to RAMprep and added npm run audit:brand.
- Replaced the small header logo family with a clearer RAMprep R route badge and kept the header calmer.
- Made remembered exercise defaults equipment-specific and recalculated from completed workout history.
- Added active workout draft autosave/restore and a confirmed Discard draft path.
- Preserved the five-routine rotation, Change it up, embedded Watch videos, Ride-only activities, and USDA private setting behavior.

Branding Fixes

- About screen now says About RAMprep with casing preserved.
- Share actions say Share RAMprep.
- Header logo aria label and public metadata use RAMprep.
- README, manifest, title, public SVG labels, and GitHub workflow metadata were scanned.
- audit:brand fails on non-allowlisted RampRep, RAMPREP, Ramprep, and RamPrep variants.

Remembered Defaults Behavior

- Default priority: pinned user default, latest completed entry for same exercise and equipmentKey, routine prescription, seed default, empty fallback.
- Permanent defaults update only from completed entries. Opening, editing active drafts, skipped exercises, skipped workouts, and abandoned drafts do not update defaults.
- Defaults are keyed by exerciseId plus equipmentKey. Old entries missing equipmentKey are normalized from the exercise equipment list.
- Edit/delete repair rebuilds defaults from chronological completedAt order. Older edits do not override newer logs; deleting newest falls back to the previous completed value.
- Free-log completed exercises update remembered defaults. Notes are not reused automatically.
- Change it up replacements resolve defaults by the selected replacement exercise, not the original routine slot.

Test And Audit Evidence

Command	Result
npm run lint	passed
npm test -- --run	20 files, 95 tests passed
npm run audit:media	passed - 66 source records
npm run audit:guides	passed
npm run audit:routines	passed - five rotation routines preserved
npm run audit:brand	passed
npm run build	passed
USDA exact key scan	passed - key absent from source, docs, dist, and report assets

Deployment Verification

- Feature branch was pushed to GitHub and merged to main after local checks passed.
- GitHub Pages workflow completed successfully for main SHA 5ade066c6357bf87554467ade1f30c9f6622f315.
- Live cache-busted smoke test confirmed Today loads, Train loads, next routine appears, Browse routines opens, Change it up opens, Watch opens a movement demo, and More > About shows RAMprep.

USDA Safety

- The private USDA key value is REDACTED and is not written to source, dist, screenshots, or report text.
- Export keeps USDA private settings out of carbSettings and backup JSON.
- Internal setting key names remain in source because they are not secrets.

Remaining Manual Review Items

- Review the new RAMprep logo preference on a real iPhone home screen after installing from Safari.
- Continue normal training use to validate long-term defaults across personal historical data beyond the automated fixtures.
- The final post-report Pages commit and workflow run are recorded in the final handoff.
