

RampRep Real Exercise Demos + Activity Logging Cleanup

Prepared June 24, 2026 from the local RampRep branch `feat/real-exercise-demos-activity-logging-cleanup`. This report is safe to share: USDA FoodData Central API key material is intentionally omitted and redacted from all screenshots and text.

Area	What changed
Taxonomy	Added explicit movementExercise vs activitySession classification and lower-case learning behavior contracts: watch, read, localHow, checklist, needsReview.
Sources	Removed local checklist coverage from true movement exercises. Promoted exact exercise-specific sources for core, hinge, bench, carry, and posture movements. Demoted unsourced movements to optional/search-only needsReview.
Activity sessions	Ride, walk, ruck, dog walk, commute, Burley, trailer, and touring sessions now use local checklist/logging only. They do not show Watch or Demo Needed.
UI	Library cards show Watch/Read for movement exercises and Checklist/Log for activity sessions. Activity overlays use Activity checklist language and Log activity actions.
Media QA	Advanced Media Coverage panel now groups Movement exercises, Activity sessions, and Optional/search-only rows with summary counts and issue fields.

Coverage Counts

Category	Count
Movement exercises with video	4
Movement exercises with direct article	18
Default-visible movement exercises missing direct source	0
Activity sessions with local checklist/log behavior	17
Generic/search/provider-root URLs found	0

Verification

- npm run audit:media - passed for 64 source records.
- npm test -- --run - 16 files / 69 tests passed.
- npm run lint - passed.
- npm run build - passed with only the existing Vite chunk-size warning.
- 390x844 and 430x932 page-level overflow checks - passed with zero horizontal overflow failures.

- Exact USDA API key scan - passed; key not present in tracked files. The key remains local-only private app data and is not included in JSON export.

Deployment Status

Local implementation and QA are complete. The branch is ready to push, merge into main, and verify through GitHub Pages. The final Codex response should record the exact commit, push, and live Pages URL once deployment completes.

Recommended Next Steps

- Keep filling optional/search-only movement rows with exact exercise-specific videos or articles, then promote only the useful ones back into default visibility.
- Consider a dedicated ActivityLogView component if activity checklist overlays should become a richer logging-first screen later.
- Add a small source-curation checklist to future media work: exact URL, exercise match, no provider root, no search URL, no activity Watch behavior.

90/90 hip switch

Do

Mistakes

Source

DO

Hip internal and external rotation practice for saddle comfort and easier low-speed bike handling.

Setup

Sit tall on the floor. Bend both knees so the front shin and back shin each form roughly 90 degrees. Place fingertips lightly behind you if balance or hip mobility is limited.

1. hands: start with ribs stacked over hips and both sit bones heavy.
2. feet: press the outside edges of both feet into the floor.
3. hips: rotate both knees slowly toward the opposite side while keeping feet close to their starting spots.
4. ribs: let hips rotate first; avoid yanking from the low back.
5. knees: arrive in the opposite 90/90

Activity checklist - commute walk

[< Back](#) ACTIVITY CHECKLIST
commute walk

Checklist

Safety

CHECKLIST

Default 1.2 mile commute walk for easy consistency.

Setup

Start at an easy pace and keep the walk conversational.

1. hands: start at an easy pace and keep the walk conversational.
2. feet: stand tall, breathe steadily, and let the walk build base without becoming a workout test.
3. hips: stop with enough energy that tomorrow still feels available.

25 min / 1.2 mi

Use this before the session, then log duration, distance, load, effort, and notes from the Ride screen.

Stop if

- Stop if pain, numbness, dizziness, or sharp joint discomfort appears.

Grouped Media Matrix Snapshot

This abbreviated matrix reflects the Advanced > Media coverage screen. Full row-level detail lives in the app under More > Advanced edit mode > Media coverage.

Group	Required behavior	Status
Default-visible movement exercises	Watch or Read only	0 missing direct sources
Activity sessions	Checklist + Log activity only	17 verified local checklists
Optional/search-only movement rows	Needs review or reviewed source	Hidden from default Library unless searched or edit mode is on
Generic URLs	Rejected by audit	0 found
