

RampRep v1.3 Net Carb Tracker

Handoff report for RAM Prep: Ride Across America Preparation.

Field	Value
Report date	June 23, 2026
Branch	v1.3-net-carb-tracker
Feature commit	e1f1d1f
Merged main commit	69392c6
GitHub Pages	https://kevinhegg.github.io/ramprep/
Pages run	https://github.com/KevinHegg/ramprep/actions/runs/28001139394

Summary

- Added a one-user, mobile-first net-carb tracker focused only on net carbs.
- Bottom nav is now Dashboard, Workouts, Log, Carbs, Progress; Settings moved to the header gear.
- Manual integer entry is the primary workflow with large steppers, quick picks, meal slots, edit, and delete.
- Optional USDA FoodData Central and Open Food Facts lookup adapters fill net carbs, with manual override before save.
- Daily, weekly, monthly, day-of-week, meal-slot, and goal-compliance reports are available inside Carbs.
- Existing workout, roadmap, branding, PWA, and GitHub Pages behavior remains intact.

Data Model Changes

- Dexie schema advanced to version 3 with carbEntries, carbSettings, carbGoalHistory, carbPresets, and foodLookupCache.
- CarbEntry stores dateISO, mealSlot, integer netCarbs, sourceType, source label, optional savedFoodName, and goalGramsAtEntry.
- CarbSettings stores dailyNetCarbGoalGrams default 50, saveFoodNamesInLog default off, sugar alcohol behavior, local USDA key, and preferred source.
- CarbGoalHistory preserves the goal that applied historically so old days are not blindly recalculated against today's goal.
- Export/import now includes carb entries, sanitized carb settings, goal history, and presets; lookup cache is omitted from normal backup JSON.
- Separate carb CSV export was added alongside workout CSV export.

Privacy Choices

- No calories are tracked or displayed.
- No full food diary, meal photos, recipes, barcode scanner, or coaching features were added.
- Food names are not saved in daily carb logs by default; lookup/preset names only persist if the user turns on Save food names in carb log.
- FoodData Central API key is stored locally and excluded from normal JSON export. A separate private JSON export requires explicit confirmation.

- Manual entry works fully offline and remains the source of truth.

Nutrition Source Notes

- USDA FoodData Central support uses the user's own local API key and calls search plus detail endpoints.
- Open Food Facts is optional and explicit-submit only; the UI warns that it is crowdsourced and package labels should be verified.
- Net carbs are calculated as $\max(0, \text{round}(\text{total carbohydrate} - \text{dietary fiber}))$.
- When enabled and explicit data exists, sugar alcohols are subtracted: $\text{total carbohydrate} - \text{dietary fiber} - \text{sugar alcohols}$.
- Every lookup result shows the formula before adding and gives a manual override picker.

Testing And QA

- npm run lint passed locally.
- npm test passed locally: 8 test files, 25 tests.
- npm run build passed locally with Vite base path /ramprep/.
- Mobile screenshot capture used a 390 x 844 viewport and confirmed no calorie text in the UI.
- Live GitHub Pages smoke test passed: dashboard carb card, exact Carbs bottom nav, Settings gear, Quick Add, and no console warnings/errors.

Deployment Status

- Merged to main at 69392c6.
- GitHub Pages deployment succeeded: <https://github.com/KevinHegg/ramprep/actions/runs/28001139394>.
- Live app URL: <https://kevinhegg.github.io/ramprep/>.
- No manual deployment steps are needed.
- Optional manual setup: paste a USDA FoodData Central API key in Carb Settings if USDA lookup is desired.
- Non-blocking Actions annotation remains: GitHub Actions reports Node.js 20 deprecation for upstream actions forced to Node.js 24.

Recommended Next Steps

- Add serving-size scaling after lookup detail when nutrition sources provide per-100g and serving values ambiguously.
- Add an undo snackbar for preset and manual adds instead of relying only on entry delete.
- Add range controls for carb reports once the user has enough real tracking history.
- Consider optional barcode lookup later only if it can stay lightweight and not turn this into a full food journal.
